Change Record

| No. | Description | Reference | Reason |
|-----|--|-------------------------|-------------|
| 1. | New document | Whole | |
| 1. | | document | |
| 2. | New operations Conclude, Printout and | 5.2, 5.4, | |
| | CalculateNextPolicyStartDate in MTPL web service | 5.5 | |
| 3. | New web service for MOD | 4 | BALTA-1121 |
| 4. | Parameter change for operation CalculateNextPolicyStartDate in MTPL web service | 5.2 | BALTA-1797 |
| 5. | Access to previous versions during client software upgrade | 2.4 | |
| 6. | HTTP GET and POST interface for requests | Whole document | BALTA-4157 |
| 7. | Graphical User Interface | 2.5 | BALTA-4157 |
| 8. | Currency parameter added | 4.1 | BALTA-3712 |
| 9. | MOD web service Calculate operation's input parameter "IsReplacement" is set as for future use only. | 4.1 | BALTA-4577 |
| 10. | New common data structure for Address | 2.3.1 | BALTA-3939 |
| 11. | New common data structure for Person | 2.3.1 | BALTA-3939 |
| 12 | Updated common data structure for Message | 2.3.3 | BALTA-3939 |
| 13. | New web service Classificator | 3 | BALTA-3939 |
| 14. | New web service Security | 6 | BALTA-3939 |
| 15. | Redesign of of MOD web service | 4 | BALTA-3939 |
| 16. | Address. House changed to required attribute. | 2.3.1 | BALTA-3939 |
| 17. | New attributes PolicyBuyerCode and PolicyBuyerName in MTPL web service operation Save | 5.3 | BALTA-7601 |
| 18. | New attribute PremiumVariant. ExcessOtherStandardPercentage in Policy05 data structure | 4.1 | BALTA-8655 |
| 19. | New response parameter TowingService added to response message of MTPL Calculate operation. | 5.1 | MOD-232 |
| 20. | Changed Message data structure and added system message description | Whole document | |
| 21. | New system message VehicleAlreadyInsured added to MTPL web service operations Save and Calculate | 5.3, 5.4 | BALTA-8854 |
| 22. | Removed attribute PolicyPeriod in MTPL web service operation Calculate | 5.1 | BALTA-9005 |
| 23. | New classificatory methods added to Classificator web service. Changes in MOD web service Policy05 data structure. Removed attribute SpecialConditionsBeneficiary. | 2.3.3, 3.2, 3.3, 4.1 | BALTA-10564 |

| _ | | | |
|------|--|--------------|--------------------------|
| | Introduced complex data type Beneficiary. Added attribute ExternalPremium. | | |
| 24. | Removed deprecated MOD printouts: | 4.7 | BALTA-11958 |
| | Object Policy, MTA7D | | |
| | Policy, MTA7D | | |
| | | | |
| 25. | New system message AutomaticCalculationUnavailable added to MTPL web service operation Calculate | 5.1 | WEBMAINTENANCE- 61 |
| 26. | Added attributes SalesUnitID and SalesPersonID in | 3.4, 5.3, | WEBMAINTENANCE- |
| | MTPL web service operations Save and Conclude. Added operation ListOrganizationalStructure in Classificator web service. | 5.4 | 1011 |
| 27 | New web service Purchase Insurance | | WEBMAINTENANCE- |
| 27. | | | 1086 |
| 28. | New web services Policy and Payment | 1.2, 2.3, 7, | WEBMAINTENANCE- |
| | | 8 | 1141 |
| 29. | New operation CalculateVariant in Purchase Insurance web service | | WEBMAINTENANCE- 1435 |
| | New attribute SecurityKeylessGo in MOD policy data | 4.1 | WEBMAINTENANCE- |
| 30. | structure | 1.1 | 1494 |
| 31. | New classificator | 3.1, 4.1 | WEBMAINTENANCE- |
| 31. | 21101/SecurityVehicleTrackingSystem | | 1557 |
| 32. | New attributes BillReferenceNr, PolicyStartDate and | 5.1, 5.2, | WEBMAINTENANCE- |
| | ClientIPAddress for MTPL operations | 5.3, 5.4 | 1662, WEBMAINTENANCE- |
| | | | 1683 |
| 33. | New classificator 21101/ExcessOtherStandardAmount. | 3.1, 4.1 | WEBMAINTENANCE- |
| 33. | New attribute ExcessTheftFromVehicleAmount in MOD | | 1869 |
| | policy data structure. Changed data type for attribute | | |
| | ExcessOtherStandardAmount in MOD policy data | | |
| | structure. | | |
| 34. | New operation ListBrokerInvoiceDetails in Payment | 8.1 | WEBMAINTENANCE- |
| J-T. | web service | 4.1 | 1818 |
| 35. | New attribute | 4.1 | WEBMAINTENANCE- 1873 |
| | SecurityVehicleTrackingSystemMakeModelExtension in MOD policy data structure | | 10/3 |
| 26 | New attribute ContractReference in Purchase Insurance | | WEBMAINTENANCE- |
| 36. | policy data structure | | 1926 |
| 37. | New attributes SalesUnitID and SalesPersonID in MTPL | 5.1 | WEBMAINTENANCE- |
| | web service operation Calculate. | 5152 | 1980 |
| 38. | New attributes Personal Accidents, Direct Claim Settlement, Theft, Road Assistance in MTPL | 5.1, 5.3 | BALTA-22952 |
| | web service oparations Calculate and Save. | | |
| 39. | New classificator 21101/SecurityMarking. | 3.1, 4.1 | WEBMAINTENANCE- |
| | Changed data type for attribute SecurityMarking in | | 2251 |
| | MOD policy data structure. | | MIEDA (A PAIDEN) ANCE |
| 40. | New classificator 14102P/CategoryExtendedWarranty. New attribute CoverExtendedWarranty in Purchase | | WEBMAINTENANCE- 2245 |
| | Insurance policy data structure. | | 22 7 3 |
| 11 | Attributes | 3.1, 4.1 | WEBMAINTENANCE- |

1 Introduction

This document describes web service "Veseris" interface design for version 1.69.00 or newer. The purpose of this document is to define message exchange sequence, format and usage.

1.1 Audience

The intended audience of this document are:

- The specialists of AAS BALTA IT Department, who are authorized to make decisions about information system development;
- The specialists of AAS BALTA IT Department, who are involved in development of web service "Veseris";
- The specialists of AAS BALTA IT Department, who are involved in testing of web service "Veseris";
- The specialists of AAS BALTA partners, who are involved in development of solutions, that use web service "Veseris";
- Information systems auditors.

1.2 Overview

Chapter 1 contains introduction.

Chapter 2 contains overall technical description of web service.

Chapter 3 contains specification of web service operations regarding classificator.

Chapter 4 contains specification of web service operations regarding MOD insurance.

Chapter 5 contains specification of web service operations regarding MTPL insurance.

Chapter 6 contains specification of web service operations regarding MTPL Driver personal accident insurance.

Chapter 7 contains specification of web service operations regarding policy data replication.

Chapter 8 contains specification of web service operations regarding payment data replication.

Chapter 9 contains specification of web service operations regarding Road assistance service insurance.

Chapter 10 contains specification of web service operations regarding Substitute vehicle insurance.

1.3 Terms

Refer to (Tabula 1-1) for terms and their explanations.

Tabula 1-1

| Term | Explanation |
|------|-------------|
| | |

1.4 Abbreviations

Refer to (Tabula 1-2) for abbreviations and their explanations.

Tabula 1-2

| Abbreviation | Explanation |
|--------------|---|
| GUI | Graphical User Interface |
| HTTP | HyperText Tranfer Protocol |
| HTTPS | HyperText Tranfer Protocol, Secure |
| ID | Identifier |
| LMIB | Motor Insurers' Bureau of Latvia |
| MOD | Motor Own Damage |
| MTPL | Motor Third Party Liability |
| SOAP | Simple Object Access Protocol / Service Oriented Architecture |
| | Protocol |
| SSL | Secure Sockets Layer |
| URL | Uniform Resource Locator |
| WS | Web Service |
| WSDL | Web Services Description Language |
| XML | eXtensible Markup Language |

1.5 Formatting legend

Refer to (Tabula 1-3) for format examples and their meaning.

Tabula 1-3

| Format | Meaning |
|---------------------------|-------------------------------|
| Command::CHARACTER(50) | Parameter/Variable::Data type |
| wAlts.Pieteiku.PieteikuID | Database.Table.Field |
| echo session_id(); | Source code. |

2 Overall Technical Description

2.1 Technology

"Veseris" is implemented as suite of web services in context of Microsoft .NET. One .NET service file (.asmx) typically corresponds to one logical business component in context of object oriented programming.

Primary protocols are SOAP 1.1 and SOAP 1.2. Additionally HTTP GET (depending on input length) and POST request parameters are supported.

Message exchange is implemented using HTTPS.

Message encoding is UTF-8.

2.2 Security

Data exchange between client and server is secured using TLS 1.2 with at least 2048 bit asymmetrical keys and at least 128 bit symmetrical keys.

For client authentication a client certificate issued by AAS "BALTA" should be presented for each request.

2.3 Data

In case of SOAP interface all operation parameters are passed with one complex data type.

In case of HTTP GET / POST interface all operation parameters are passed as generic HTTP GET / POST parameters. Empty parameters may be omitted.

Operation result is returned as one complex data type.

Complex data type may contain the following simple data types:

- boolean
- dateTime
- decimal
- integer
- string

as well as other complex data types and arrays of all above mentioned data types.

In case of HTTP GET / POST interface any reasonable format may be used for boolean and dateTime parameters, however for decimal parameters only dot "." shall be used as decimal mark.

2.3.1 Address

The following complex data structure **Address** is used to represent address data both in input parameters and operation result.

| Address.Country::string | Country code according to classificator Country (ISO 3166-1 alpha-2) |
|-------------------------|--|
| Address.City::string | Address starting with the most general part down to but not including Street or House e.g. |

| | A Diag |
|---------------------------|---|
| | • Rīga |
| | Siguldas nov., Sigulda Did by British |
| | Priekuļu nov., Priekuļu pag. |
| | Priekuļu nov., Priekuļu pag., Jāņmuiža |
| | Required. |
| Address.Street::string | Street name e.g. |
| | Brīvības iela |
| | Vienības laukums |
| Address.House::string | House number or name e.g. |
| | • 1 |
| | • 1A |
| | • 1/2 |
| | • 1 k-1 |
| | • "Avotiņi" |
| | • "Avotiņi-1" |
| | Required. |
| Address.Apartment::string | Apartment number e.g. |
| | • 1 |
| | • 1a |
| | If House and Apartment in source data are available as concatenation only, it is preferred to pass them in input parameters as House leaving Apartment blank. |
| Address.PostCode::string | Post code e.g. |
| | • LV-1039 |
| | Required. |
| Address.FullText::string | Full address as defined in <u>"Adresācijas sistēmas noteikumi"</u> and described in <u>"Kā pareizi rakstīt pasta adresi?"</u> e.g. |
| | • Rīgas iela 1 - 2, Sigulda, Siguldas nov., LV- 2150 |
| | • "Ābelītes", Ropažu nov., LV-2135 |
| | Read only. |
| | Exception - if FullText is the only attribute set in input parameters, system will try to parse this text into structured address. |

2.3.2 Person

The following complex data structure **Person** is used to represent person data both in input parameters and operation result.

| Person.PersonID::integer | Person ID in BALTA systems. |
|--------------------------|-----------------------------|
|--------------------------|-----------------------------|

| | Read only. | |
|------------------------------|--|--|
| Person.Type::integer | According to classificator PersonType | |
| | 1 – Natural person | |
| | 2 – Legal person | |
| | Required. | |
| Person.Resident::Boolean | Indicator, whether person is resident. | |
| | Required. | |
| Person.ldentityNo::string | Personal identity No. for natural persons. | |
| | Organization registration No. for legal persons. | |
| | Required. | |
| | If person data structure is used as input, this attribute is used to | |
| | reference existing person in BALTA systems if PersonID is not set, | |
| | retrieve legal person data from Lursoft systems if PersonID is not set. | |
| Person.Name::string | Name for natural persons. Required. | |
| | Shall not be set for legal persons. | |
| Person.Surname::string | Surname for natural persons. Required. | |
| - | Full name for legal persons. Required. | |
| Person.DateOfBirth::dateTime | Date of birth for natural persons. Required. | |
| | Registration date for legal persons. Required. | |
| Person.Telephone::string | Telephone No 8 digits. | |
| Person.Email::string | Email address. | |
| Person.Address::Address | Declared address. | |

2.3.3 Beneficiary

The following complex data structure **Beneficiary** is used to represent object or policy line beneficiary data both in input parameters and operation result.

| Beneficiary.BeneficiaryID::integer | Person ID in BALTA systems. | |
|------------------------------------|--|--|
| | Required. | |
| Beneficiary.Percentage::integer | Percentage of benefit that beneficiary receives. | |
| | Required. | |
| Beneficiary.DateFrom::dateTime | Date from which beneficiary is enabled. | |
| | Policy start date as default value. | |
| Beneficiary.DateTo::dateTime | Date to which beneficiary is enabled. | |
| | Policy end date as default value. | |

2.3.4 Vehicle

The following complex data structure **Vehicle** is used to represent vehicle data both in input parameters and operation result..

| Vehicle.VehicleRegNr::string | Vehicle registration (plate) number. |
|--------------------------------------|--|
| Vehicle.VehicleRegCertNr::string | Vehicle registration certificate number. |
| Vehicle.VehicleChassisNr::string | Vehicle chassis (VIN) number |
| Vehicle.VehicleBrand::string | Vehicle brand (e.g. Toyota). |
| Vehicle.VehicleModel::string | Vehicle model (e.g. Avensis). |
| Vehicle. VehicleReleaseYear::integer | Vehicle release year (e.g. 2015). |
| Vehicle.VehicleOwner::Person | Vehicle owner. |
| Vehicle.VehicleHolder::Person | Vehicle holder. |

2.3.5 Message

Operation result may contain an array with system messages Message.

| Message.Type::integer | Message type. | |
|-----------------------|--|--|
| | 1 – error | |
| | 2 – warning | |
| | 4 – information | |
| Message.Code::string | Message code. Intended for machine processing. | |
| Message,Text::string | Message text. Intended for human processing | |

Operation has been completed successfully if the result does not contain errors (messages with type 1).

The following common system messages are generated at web service level:

| Mess | Messages | | | |
|------|------------------------------------|---|--|--|
| Туре | Code | Text | Condition | |
| 1 | DataAuthorizationFailed | Jums nav pilnvaru darbam ar šiem datiem. Piekļuve ir liegta. | User is not authorized to process particular data. Access denied. | |
| | | | Most likely cause is accessing policy of another sales unit. | |
| 1 | Functional Authorization Failed | Jums nav pilnvaru veikt šo darbību. Piekļuve ir liegta. | User is not authorized to execute particular operation. Access denied. | |
| | | | Most likely cause is executing operation for an insurance product, that user does not have permission for. | |

| 1 | HolderNotFound | Transportlīdzekļa [VehicleRegNr] turētāja dati nav atrasti CSDD / VTUA reģistrā. Lūdzu, pārbaudiet transportlīdzekļa reģistrācijas apliecības numuru un īpašnieka personas kodu / reģistrācijas numuru! Vehicle holder data for particular input parameters are not found. Most likely cause are obsolete vehicle registration data. | |
|---|------------------------------|--|--|
| 1 | LTABConnectionError | Diemžēl pašlaik nav iespējams piekļūt datiem CSDD / VTUA reģistrā. Lūdzu, mēģiniet pēc brīža vēlreiz! | Connection to external entity – LTAB – for vehicle data retrieval from CSDD / VTUA failed. |
| 1 | OwnerNotFound | Transportlīdzekļa [VehicleRegNr] īpašnieka dati nav atrasti CSDD / VTUA reģistrā. Lūdzu, pārbaudiet transportlīdzekļa reģistrācijas apliecības numuru un īpašnieka personas kodu / reģistrācijas numuru! Vehicle owner data for particular input parameter not found. Most likely cause are obs vehicle registration data. | |
| 2 | PolicyAuthorizationRequired | Nepieciešama polises autorizācija. | Business authorization is required for policy with particular PolicyID. |
| 1 | PolicyDataChanged | Ieraksta dati ir mainījušies, kopš Jūs atvērāt to rediģēšanas režīmā. Jūsu veiktās izmaiņas netiek saglabātas. | New version of policy with particular PolicyID has been stored in database already. Executed operation data is obsolete. |
| 1 | PolicyNotFound | Polise ar šo numuru nav atrasta. | Policy with particular PolicyID is not found. |
| 1 | PolicyDocumentsNotAv ailable | v Polises dokumenti pašlaik nav pieejami. Policy editing is in pro Policy document print not available. | |
| 1 | ServiceTemporaryUnava ilable | Pakalpojums šobrīd nav pieejams. | Particular service is unavailable at the moment. Retry later. |
| 1 | SystemError | Sistēmas kļūda. | Unexpected error occurred during operation execution. |
| 1 | VehicleNotFound | Transportlīdzeklis [VehicleRegNr] nav atrasts CSDD / VTUA reģistrā. Lūdzu, pārbaudiet transportlīdzekļa reģistrācijas numuru, reģistrācijas apliecības numuru un īpašnieka personas kodu / reģistrācijas numuru! Vehicle data for particu parameters are not foun Most likely cause are o vehicle registration data | |
| 1 | WrongPolicyProduct | Polise attiecas uz citu apdrošināšanas produktu. | Policy with particular PolicyID is for different insurance |

| | product than executed operation. | |
|--|----------------------------------|--|
|--|----------------------------------|--|

2.4 Previous version

To provide reasonable transition period for client software upgrade in case of interface definition changes, previous version of web services is available at least for one month in path

/Veseris/Deprecated/

e.g. in case of MTPL web service, the following URL points to current version

https://www.baltaonline.lv:8443/Veseris/Policy/18.asmx

and the following URL points to previous version

https://www.baltaonline.lv:8443/Veseris/Deprecated/Policy/18.asmx

2.5 Graphical User Interface

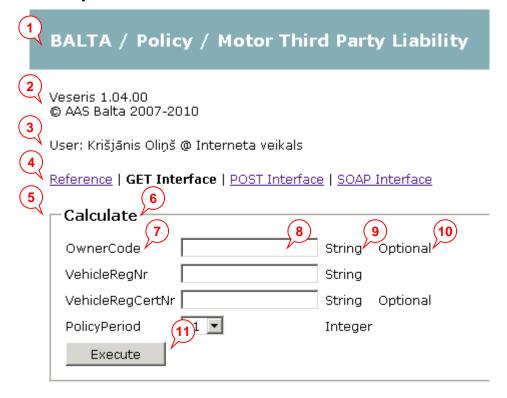

To provide human accessible interface for testing and diagnostics purposes, graphical user interface for each web service is available at URL which matches that of corresponding web service without file extension, e.g., if web service URL is

https://www.baltaonline.lv:8443/Veseris/Policy/18.asmx

then GUI URL is

https://www.baltaonline.lv:8443/Veseris/Policy/18

Overall form layout is as follows:

[1] Web service description.

- [2] Application version.
- [3] Application user and organizational unit name.
- [4] Navigation bar with links to web service interface reference document (this document) and alternative technical interfaces.
- [5] List of supported operations. Each operation form consists of:
 - [6] operation name;

list of operation parameters that consists of:

- [7] parameter name;
- [8] parameter value;
- [9] parameter data type;
- [10] indication, whether parameter is optional;
- [11] command button to execute operation.

All operation and parameter names and values are their technical names and values.

Operation execution result is returned in new browser window. It may be either XML document or PDF document.

For business semantics one should consult corresponding chapter of this document.

GUI may be used either with HTTP GET (default) or with HTTP POST technical interface.

3 Classificator

https://www.baltaonline.lv:8443/Veseris/Classificator.asmx https://www.baltaonline.lv:8443/Veseris/Classificator

This web service provides classificator related operations.

3.1 *List*

Operation is used to retrieve generic classificator.

| Parameters | | |
|--|--|--|
| Domain::string I a string I a string | Classificator domain: | |
| ProductLineVersionID::integ er | Product line version to retrieve product specific classificator for. | |
| | If parameter is empty, current version is used. | |
| VersionDate::dateTime | Moment in time to retrieve classificator for. | |

```
If parameter is empty, current date and time is used.
POST /Veseris/Classificator.asmx HTTP/1.1
Host: www.baltaonline.lv:8443
Content-Type: text/xml; charset=utf-8
Content-Length: length
SOAPAction: "http://www.balta.lv/List"
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"</pre>
xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
  <List xmlns="http://www.balta.lv/">
    <Domain>string</Domain>
    <ProductLineVersionID>int</ProductLineVersionID>
    <VersionDate>dateTime</VersionDate>
  </List>
 </soap:Body>
</soap:Envelope>
GET / POST
/Veseris/Classificator/List.aspx
Domain=string
&ProductLineVersionID=integer
&VersionDate=dateTime
```

| Result | | |
|---|--|--|
| | Array with classificator items. | |
| Item.Code::string | Classificator code. Intended for machine processing. | |
| Item.Description::string | Classificator text. Intended for human processing. | |
| HTTP/1.1 200 OK | | |
| Content-Type: text/xml; charset=utf-8 | | |
| Content-Length: length | | |
| <pre><?xml version="1.0" encoding="utf-8"?> <soap:envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"></soap:envelope></pre> | | |
| <item></item> | | |
| <code>string</code> | | |
| <description>string</description> | | |
| | | |
| <item></item> | | |
| <code>string</code> | | |
| <description>string</description> | | |
| | | |

3.2 ListBankingInstitution

Operation is used to retrieve banking institutions classificatory from BALTA systems.

```
POST /Veseris/Classificator.asmx HTTP/1.1
Host: webdev.lv.ncem.rsa-ins.com:8000
Content-Type: text/xml; charset=utf-8
Content-Length: length
SOAPAction: "http://www.balta.lv/ListBankingInstitution"

<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
<soap:Body>
<ListBankingInstitution xmlns="http://www.balta.lv/" />
</soap:Body>
</soap:Body>
</soap:Body>
</soap:Envelope>

GET / POST
/Veseris/Classificator/ListBankingInstitution.aspx
```

| Result | | |
|---|---|--|
| | Array with classificator items. | |
| Institution.InstitutionID::integer | | |
| Institution.RegistrationNo::string | Institution common registration number. | |
| Institution.Name::string | Institution name in BALTA systems. | |
| Content-Type: text/xml; charset=utf-8 Content-Length: length xml version="1.0" encoding="utf-8"? <soap:envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"></soap:envelope> | | |
| <pre><soap:body> <listbankinginstitutionresponse xmlns="http://www.balta.lv/"> <listbankinginstitutionresult> <institution> <institutionid>int <registrationno>string</registrationno> <name>string</name> </institutionid></institution> </listbankinginstitutionresult> </listbankinginstitutionresponse> </soap:body></pre> | | |
| | | |

3.3 ListLeasingInstitution

Operation is used to retrieve leasing institutions classificatory from BALTA systems.

```
POST /Veseris/Classificator.asmx HTTP/1.1
Host: webdev.lv.ncem.rsa-ins.com:8000
Content-Type: text/xml; charset=utf-8
Content-Length: length
SOAPAction: "http://www.balta.lv/ListLeasingInstitution"

<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
<soap:Body>
<ListLeasingInstitution xmlns="http://www.balta.lv/" />
</soap:Body>
</soap:Envelope>

GET / POST
/Veseris/Classificator/ListLeasngInstitution.aspx
```

| Result | | |
|---|---|--|
| | Array with classificator items. | |
| Institution.InstitutionID::integer | Institution ID in BALTA systems. | |
| Institution.RegistrationNo::string | on.RegistrationNo::string Institution common registration number. | |
| Institution.Name::string | Institution name in BALTA systems. | |
| HTTP/1.1 200 OK Content-Type: text/xml; charset=utf-8 Content-Length: length | | |
| <pre><?xml version="1.0" encoding="utf-8"?> <soap:envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"> <soap:body></soap:body></soap:envelope></pre> | | |
| <listleasinginstitutionresponse xmlns="http://www.balta.lv/"> <listleasinginstitutionresult> <institution></institution></listleasinginstitutionresult></listleasinginstitutionresponse> | | |
| <institutionid>int</institutionid> <registrationno>string</registrationno> <name>string</name> | | |
| | | |
| | | |

GET / POST

3.4 ListOrganizationalStructure

/Veseris/Classificator/ListOrganizationalStructure.aspx

Operation is used to retrieve organizational structure in context of current application user. All organizational units that are managed by application user - both directly and indirectly - are included. All employees of these organizational units are included. One employee may be related to multiple organizational units.

POST /Veseris/Classificator.asmx HTTP/1.1 Host: www.baltaonline.lv:8443 Content-Type: text/xml; charset=utf-8 Content-Length: length SOAPAction: "http://www.balta.lv/ListOrganizationalStructure" <?xml version="1.0" encoding="utf-8"?> <soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"> <soap:Body> <ListOrganizationalStructurexmlns="http://www.balta.lv/" /> </soap:Body> </soap:Body> </soap:Body> </soap:Envelope>

| Result | |
|--------------------------------|--|
| OrganizationalUnit() | Array with organizational units. |
| PersonID::integer | Organizational unit person ID in BALTA systems. |
| RegistrationNo::string | Organizational unit registration No. |
| Name::string | Organizational unit name. |
| OrganizationalUnit .Employee() | Array with employees of particular organizational unit. |
| PersonID::integer | Employee person ID in BALTA systems. |
| IdentityNo::string | Employee identity No. May be used to perform user mapping between external systems and BALTA systems. |
| Name::string | Employee name. |
| Surname::string | Employee surname. |

3.5 ListVehicleBrandModel

Operation is used to retrieve vehicle brand and model classificator.

```
POST /Veseris/Classificator.asmx HTTP/1.1
Host: www.baltaonline.lv:8443
Content-Type: text/xml; charset=utf-8
Content-Length: length
SOAPAction: "http://www.balta.lv/ListVehicleBrandModel"

<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
<soap:Body>
<ListVehicleBrandModel xmlns="http://www.balta.lv/" />
</soap:Body>
</soap:Envelope>

GET / POST
/Veseris/Classificator/ListVehicleBrandModel.aspx
```

| Result | | |
|--|--|--|
| | Array with classificator items. | |
| VehicleBrandModel.Brand::string | eBrandModel.Brand::string Vehicle brand. | |
| VehicleBrandModel.Model::string Vehicle model. | | |
| HTTP/1.1 200 OK Content-Type: text/xml; charset=utf-8 Content-Length: length xml version="1.0" encoding="utf-8"? <soap:envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"></soap:envelope> | | |
| <pre>xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"></pre> | | |

4 MOD insurance

 $\underline{https://www.baltaonline.lv:8443/Veseris/Policy/05.asmx}$

https://www.baltaonline.lv:8443/Veseris/Policy/05

Motor Own Damage (MOD, KASKO).

4.1 Policy05 Data Structure

The following complex data structure **Policy05** is used to represent policy data both in input parameters and operation result in context of MOD web service.

| Policy05 | |
|------------------------------|--|
| PolicyID::integer | Policy (quotation) number. Read only. |
| Status::string | According to classificator PolicyStatus. Read only. |
| StartDate::dateTime | Cover start date. If parameter is empty, current date is used. |
| EndDate::dateTime | Cover end date. If parameter is empty, (current date + 1 year) – 1 day is used. |
| Currency::string | According to classificator Currency. For policies created since 01.01.2014 EUR only. |
| Premium::decimal | Policy premium. Read only. If input parameter value is not empty and input parameter value differs from output parameter value, then Message with Type = 4 and Code = "PolicyPremiumChanged" is included in output. |
| PaymentCount::integer | According to classificator PolicyPaymentCount. If parameter is empty, 1 is used. |
| DebtTransfer::boolean | Debt for 1 st payment • true –shall • false – shall not be transferred from PolicyHolder to SalesUnitID. |
| InvoiceReceptionType::string | Invoice reception type in case of multiple payments. According to classificator DocumentReceptionType. If input parameter value is set to FILE, then email message with invoice as attachment will be sent to PolicyHolder.Email. |

| | If input parameter value is set to LINK, then email message with hyperlink to invoice in BALTA selfcare portal will be sent to PolicyHolder.Email. If parameter PolicyHolder.Email is empty, then current policy holder email address in BALTA systems will be |
|------------------------------------|---|
| | used. If parameter PolicyHolder.Email is not empty, then policy holder email address in BALTA systems will be updated. Parameter PolicyHolder.Email MUST NOT contain e-mail address of any other person or organization than particular policy holder. |
| SalesUnitID::integer | Policy sales unit ID in BALTA systems. If parameter is empty, organizational unit ID of application user is used. |
| SalesPersonID::integer | Policy sales person ID in BALTA systems. If parameter is empty, person ID of application user is used. |
| InsuranceType::string | Insurance product subtype. Specific permissions are required to use other than empty. |
| InsuranceTerms::string | Insurance terms. According to classificator 21101/ InsuranceTerms. If parameter is empty, BASIC is used. |
| QuickQuotation::boolean | Indicator, whether validation level shall be reduced for quotation operation. Used in product version until 21.11.2018. |
| VersionID::string | Unique policy version ID. Read only. |
| VersionDate::dateTime | Policy version date. Read only. |
| PolicyHolder::Person | Policy holder. Required for unregistered vehicles. |
| PolicyHolderRepresentative::Person | Natural person signing contract on behalf of customer. |

| person. If parameter is empty, it is assumed to be the same as PolicyHolder. VehicleOwner::Person Vehicle owner. If parameter is empty, it is assumed to be the same as PolicyHolder. Policy05.PolicyLine21101 PolicyLinelD::integer Policy line ID in BALTA systems. Read only. ProductLineVersionID::integer Product line version ID. Read only. Shall be used to retrieve correct version of product specific classificators. Premium::decimal Policy05.PolicyLine21101.Object21101() ObjectID::integer Object ID in BALTA systems. |
|--|

| VehicleFuelType::string | According to classificator 21101/VehicleFuelType. Required. Retrieved from LTAB systems for registered vehicles. |
| VehicleOdometerReading::integer | Vehicle odometer reading in km. Required. Retrieved from LTAB systems for registered vehicles. |
| VehicleColor::string | Vehicle odometer reading in km. Required. Retrieved from LTAB systems for registered vehicles. |
| VehiclelsCabriolet::boolean | Indicator, whether vehicle is cabriolet. Used in product version until 29.07.2020. |
| VehicleDefects::string | Vehicle defect description. |
| VehicleWindshieldIsDamaged::boolean | Indicator, whether vehicle windshield is damaged. |
| EquipmentAllWheelDrive::boolean | Indicator, whether vehicle is equipped with all wheel drive. Used in product version until 21.03.2017. |
| EquipmentAutomaticTransmission ::boolean | Indicator, whether vehicle is equipped with automatic transmission. Used in product version until 21.03.2017. |
| EquipmentFogLamps::boolean | Indicator, whether vehicle is equipped with fog lamps. Used in product version until 21.03.2017. |
| EquipmentLeatherInterior::boolean | Indicator, whether vehicle is equipped with leather interior. Used in product version until 21.03.2017. |
| EquipmentAirConditioning::string | According to classificator 21101/EquipmentAirConditioning. Used in product version until 21.03.2017. |

| EquipmentLabels::boolean | Indicator, whether vehicle is equipped with decorative labels. |
|---|--|
| | Used in product version until 21.03.2017. |
| EquipmentAlloyWheels::boolean | Indicator, whether vehicle is equipped with alloy wheels. |
| | Used in product version until 21.03.2017. |
| EquipmentAlloyWheelsMake::string | Alloy wheels make. |
| | Used in product version until 21.03.2017. |
| EquipmentAlloyWheelsValue::decimal | Alloy wheels value in policy currency. |
| | Used in product version until 21.03.2017. |
| EquipmentTachograph::boolean | Indicator, whether vehicle is equipped with tachograph. |
| | Used in product version until 21.03.2017. |
| EquipmentAudioVideo() | Array of audio / video equipment items. No more than 4 items. |
| | No more than 1 item for product version from 22.03.2017. |
| EquipmentAudioVideo.Description ::string | Audio / video equipment item description. |
| EquipmentAudioVideo.Value::decimal | Audio / video equipment item value. |
| EquipmentAudioVideo DetachableFrontPanel::boolean | Indicator, whether vehicle audio / video equipment has detachable front panel. |
| | Used in product version until 21.03.2017. |
| EquipmentAudioVideoInstallation ::string | According to classificator 21101/EquipmentAudioVideoInstallati on. |
| | Used in product version from 22.03.2017. |
| EquipmentNightVision::boolean | Indicator, whether vehicle is equipped with night vision. |
| | Available only for BMW insurance products. |
| EquipmentActiveCruiseControl::boolean | Indicator, whether vehicle is equipped with active cruise control. |
| | Available only for BMW insurance products. |
| | |

| EquipmentElectronicStability/Control | Indicator whather webials is a swime - 1 |
|---|--|
| EquipmentElectronicStabilityControl ::boolean | Indicator, whether vehicle is equipped with electronic stability control. |
| | Available only for BMW insurance products. |
| EquipmentRearViewCamera::boolean | Indicator, whether vehicle is equipped with rear view camera. |
| | Available only for BMW insurance |
| | products. |
| EquipmentForMotorcycleRider::boolean | Indicator, whether motorcycle rider equipment shall be included in cover. |
| | Available only for BMW insurance |
| | products. |
| EquipmentTuning::boolean | Indicator, whether vehicle has tuning elements (tuning-packages, bampers etc). |
| | Used in product version from 22.03.2017. |
| EquipmentTuningDescription::string | Tuning elements make and description. |
| | Used in product version from 22.03.2017. |
| EquipmentTuningValue::decimal | Tuning elements value in policy currency. |
| | Used in product version from 22.03.2017. |
| EquipmentOther::string | Description of other equipment that shall be included in cover. |
| | Used in product version until 21.03.2017. |
| UsageSecurityServices::boolean | Indicator, whether vehicle is used by security services. |
| | Used in product version until 04.11.2020. |
| UsageDangerousCargo::boolean | Indicator, whether vehicle is used to transport dangerous cargo. |
| UsageRecreational::boolean | Indicator, whether insured object is recreational vehicle. |
| UsageAirport::boolean | Indicator, whether vehicle is used in airport. |
| | Used in product version until 04.11.2020. |
| UsageMilitary::boolean | Indicator, whether vehicle is used by military. |

| | Used in product version until 04.11.2020. |
|---|--|
| UsageDriverEducation::boolean | Indicator, whether vehicle is used for driver education. |
| UsageRental::boolean | Indicator, whether vehicle is used for rental. Used in product version until 04.11.2020. |
| UsageRentalShortTerm::boolean | Indicator, whether vehicle is used for rental with period up to 6 months. |
| UsageRentalLongTerm::boolean | Indicator, whether vehicle is used for rental with period starting with 6 months and longer. |
| UsageSecurityServicesOrEmergency ::boolean | Indicator, whether vehicle is used by security services or emergency services. |
| UsageEmergency::boolean | Indicator, whether vehicle is used by emergency services. Used in product version until 04.11.2020. |
| UsagePublicTransport::boolean | Indicator, whether vehicle is used as public transport. |
| UsageTaxi::boolean | Indicator, whether vehicle is used as taxi. Read only. |
| SecurityRequirements::string | List of security requirements for particular vehicle and cover in disjunctive normal form e.g. AlarmSystem AND FactoryImmobiliserInKey OR AlarmSystem AND Immobiliser Read only. |
| SecurityAlarmSystem::boolean | Indicator, whether vehicle is equipped with alarm system. |
| SecurityAlarmSystemMakeModel ::string | Alarm system make and model. Used in product version until 26.11.2014. |
| SecurityFactoryImmobiliserInKey ::boolean | Indicator, whether vehicle is equipped with factory immobiliser in key. |
| SecurityImmobiliser::boolean | Indicator, whether vehicle is equipped with immobiliser. |
| SecurityImmobiliserMakeModel::string | Immobiliser make and model. |

| SecurityImmobiliserPaidByInsurer | Indicator, whether immobilizer paid by insurer will be installed. |
|--|--|
| ::boolean | insurer will be installed. |
| SecurityContactlessImmobiliser ::boolean | Indicator, whether vehicle is equipped with contactless immobiliser. |
| | Used in product version until 26.11.2014. |
| SecurityContactlessImmobiliser MakeModel::string | Contactless immobiliser make and model. |
| | Used in product version until 26.11.2014. |
| SecuritySecretSwitch::boolean | Indicator, whether vehicle is equipped with secret switch. |
| SecuritySecretSwitchMakeModel::string | Secret switch make and model. |
| | Used in product version until 26.11.2014. |
| SecurityVehicleTrackingSystem ::boolean | Indicator, whether vehicle is equipped with tracking system. |
| SecurityVehicleTrackingSystem MakeModel::string | According to classificator 21101/SecurityVehicleTrackingSystem . |
| SecurityVehicleTrackingSystem MakeModelExtension::string | Additional information about vehicle tracking system model. |
| SecurityMarking::string | According to classificator 21101/SecurityMarking. |
| SecurityOther::boolean | Indicator, whether vehicle is equipped with other security systems. |
| SecurityOtherDescription::string | Description of other security systems. |
| SecurityKeylessGo::boolean | Indicator, whether vehicle is equipped with Keyless Go system. |
| SecurityVehicleKeyCount::integer | Vehicle key count. |
| SecurityImmobiliserKeyCount::integer | Immobiliser key count. |
| SecurityAlarmKeyCount::integer | Alarm system key count. |
| | Used in product version until 21.03.2017. |
| SecurityOtherKeyCount::integer | Other security system key count. |
| | Used in product version until 21.03.2017. |
| DriverAge::integer | Youngest vehicle driver age. |
| | Required if PolicyHolder is natural person. |

| 0 110 H/I 0 67 D 6 | |
|---|--|
| SpecialConditionsSoftTopRoof ::boolean | Indicator, whether special conditions regarding soft top roof are included. |
| SpecialConditionsCustomRegNr ::boolean | Indicator, whether special conditions regarding custom registration number plate are included. Used in product version until 18.03.2015. |
| SpecialConditionsWindshield::boolean | Indicator, whether special conditions regarding windshield are included. Used in product version until 18.03.2015. |
| SpecialConditionsKeys::boolean | Indicator, whether special conditions regarding keys are included. |
| SpecialConditionsOther::string | Description of other special conditions to be included in contract. |
| Beneficiary() | Array of beneficiary objects (2.3.3) related to insured object. BeneficiaryID should contain person ID in BALTA systems. ListBankingInstitution (3.2), ListLeasingInstitution (3.3) classificators may be used to retrieve list of legal person ID's in BALTA systems. |
| SumInsured::decimal | Sum insured. Required. |
| UnderinsurancePercentage::integer | Underinsurance percentage. |
| CoverTerritory::string | According to classificator 21101/CoverTerritory. Required. |
| CoverDamage::boolean | Indicator, whether cover for damage is included. True by default. Read only. |
| CoverTheft::boolean | Indicator, whether cover for theft is included. |
| CoverRoadTrafficAccident::boolean | Indicator, whether cover for road traffic accident is included. Only if InsuranceTerms = MINIMUM |
| CoverGapInsurance::boolean | Indicator, whether cover for gap insurance is included. |

| CoverGapInsuranceExtension::string | Extended gap insurance period. According to classificator 21101/CoverGapInsuranceExtension. |
|---|--|
| CoverSubstituteVehicle::Boolean | Indicator, whether cover for substitute vehicle is included. |
| CoverSubstituteVehiclePeriod::integer | According to classificator 21101/CoverSubstituteVehiclePeriod. |
| CoverSubstituteVehicleValue::integer | According to classificator 21101/CoverSubstituteVehicleValue. |
| CoverRoadAssistance::boolean | Indicator, whether cover for road assistance is included. Read only. Used in product version until 23.09.2015. |
| CoverRoadAssistanceLevel::string | Road assistance. |
| , | According to classificator 21101/CoverRoadAssistance. |
| CoverWindshieldDamage WithoutExcess::string | Cover for windshield damage for the first accident or for all accidents without excess. |
| | According to classificator 21101/CoverWindshieldDamageWitho utExcess. |
| CoverRepairInDealerService::boolean | Indicator, whether option for repairs in dealer service is available for elder vehicle. |
| | Used in product version until 15.03.2015. |
| CoverRepairInNonDealerService ::boolean | Indicator, whether option for repairs in non-dealer service is available for new vehicle. Used in product version until |
| | 15.03.2015. |
| CoverRepairServiceChoice::integer | Option for repairs in dealer or customer selected service. |
| | According to classificator 21101/CoverRepairServiceChoice. |
| CoverPackage1:: string | Indicator, whether predefined additional cover package No. 1 is used. Y – yes N – no |

| | [empty] – default value assigned by BALTA business rules |
|--------------------------------------|---|
| CoverPackage1Description::string | Predefined additional cover package No. 1 description. |
| CoverPackage2:: string | Indicator, whether predefined additional cover package No. 2 is used. Y – yes N – no [empty] – default value assigned by |
| | BALTA business rules |
| CoverPackage2Description::string | Predefined additional cover package No. 2 description. |
| CoverPackage3:: string | Indicator, whether predefined additional cover package No. 3 is used. Y – yes N – no [empty] – default value assigned by BALTA business rules |
| CoverPackage3Description::string | Predefined additional cover package No. 3 description. |
| CoverHydraulicShock::string | Indicator, whether cover for hydraulic shock is included. Y - yes N - no [empty] - default value assigned by BALTA business rules Used in product version until 25.09.2024. |
| CoverKeyReplacement::string | Indicator, whether cover for key replacement in case of loss or theft is included. Y – yes N – no [empty] – default value assigned by BALTA business rules |
| CoverLicensePlateLossOrTheft::string | Indicator, whether cover for license plate loss or theft is included. Y – yes N – no [empty] – default value assigned by BALTA business rules |

| CoverCollisionWithForestAnimal WithoutExcess::string | Indicator, whether option for cover without excess in case of collision with forest animal is included. Y – yes N – no [empty] – default value assigned by BALTA business rules |
|--|--|
| CoverGoingOffRoadWithoutExcess ::string | Indicator, whether option for cover without excess in case of going of the road is included. Y – yes N – no [empty] – default value assigned by BALTA business rules |
| CoverWheelDamageDuePothole WithoutExcess::string | Indicator, whether option for cover without excess for wheel damage due to potholes is included. Y – yes N – no [empty] – default value assigned by BALTA business rules |
| CoverDamageDuringTransportation ::string | Indicator, whether cover for damage during vehicle transportation is included. Y – yes N – no [empty] – default value assigned by BALTA business rules |
| CoverDamageInCarWash OrRepairService::string | Indicator, whether cover for damage in car wash or repair service is included. Y – yes N – no [empty] – default value assigned by BALTA business rules |
| CoverBrokenWindshield DueTemperature::string | Indicator, whether cover for windshield damage due to external temperature fluctuations is included. Y – yes N – no [empty] – default value assigned by BALTA business rules |

| CoverFuelSupplySystemCleaning ::string | Indicator, whether cover for fuel supply system cleaning in case of wrong fuel is included. Y – yes N – no [empty] – default value assigned by BALTA business rules |
|--|---|
| CoverPersonalBelongings::string | Indicator, whether cover for personal belongings within vehicle is included. Y – yes N – no [empty] – default value assigned by BALTA business rules |
| CoverTrailer::string | Indicator, whether cover for trailer is included. Y - yes N - no [empty] - default value assigned by BALTA business rules |
| CoverLeasingValue::string | Indicator, whether vehicle remaing leasing value is used if it it higher than market value in case of total loss of theft. Y - yes N - no [empty] - default value assigned by BALTA business rules |
| CoverTyreBurst::string | Indicator, whether cover for vehicle damage in case of tyre burst is included. Y - yes N - no [empty] - default value assigned by BALTA business rules |
| CoverExpensesToGetToRepairService ::string | Indicator, whether cover for personal transportation expenses to get to / from repair service is included. Y - yes N - no [empty] - default value assigned by BALTA business rules |
| CoverLuggageOutsideVehicle::string | Indicator, whether cover for luggage outside vehicle is included. |

| | Y - yes |
|---|--|
| | N - no |
| | [empty] – default value assigned by BALTA business rules |
| CoverAnimalDamageToVehicleInterior ::string | Indicator, whether cover for vehicle interior damage due to animal left in vehicle is included. Y - yes N - no [empty] - default value assigned by BALTA business rules |
| CoverRepairExpensesAbroad::string | Indicator, whether cover for repair expenses abroad is included. Y – yes N – no [empty] – default value assigned by |
| CoverDamageDuringCargoLoadingOrUnlo ading::string | BALTA business rules Indicator, whether cover for damage during cargo loading or unloading is included. Y – yes N – no |
| | [empty] – default value assigned by BALTA business rules |
| ExcessTotalLossPercentage::integer | Excess in case of total loss as percentage. If parameter is empty, minimal available value is used. |
| ExcessTheftPercentage::integer | Excess in case of theft as percentage. If parameter is empty, minimal available value is used. |
| ExcessTheftFromVehicleAmount::integer | Excess amount in case of theft from car. If parameter is empty, minimal available value is used. |
| ExcessOtherStandardAmount::string | According to classificator 21101/ ExcessOtherStandardAmount for ProductLineVersionID >= 96. |
| | According to classificator 21101/ ExcessOtherStandardAmount[Currency] for ProductLineVersionID <= 95. Values may be either numbers or numbers with additional notes, e.g.,: |

| | • 0(140)* |
|---|--|
| | • 140 |
| | If parameter is empty, minimal available value is used. |
| | Either ExcessOtherStandardAmount or ExcessOtherStandardPercentage may be used, but not both. |
| ExcessOtherStandardPercentage::integer | According to classificator 21101/ExcessOtherStandardPercentage |
| | Either ExcessOtherStandardAmount or ExcessOtherStandardPercentage may be used, but not both. |
| ExcessOtherCustomMinAmount::decimal | Minimal excess amount in case other than total loss or theft. |
| | Required if ExcessOtherStandardAmount = -1 (Other) or ExcessOtherStandardPercentage = -1 (Other). |
| ExcessOtherCustomPercentage::integer | Excess in case other than total loss or theft as percentage. |
| | Required if ExcessOtherStandardAmount = -1 (Other) or ExcessOtherStandardPercentage = -1 (Other). |
| DiscountPercentage::integer | Insured object discount as percentage. |
| ExternalPremium::decimal | External premium which is enabled only for authorized users. Read only for unauthorized users. |
| Premium::decimal | Insured object premium. Read only. |
| AutomaticFileRequest::boolean | Indicator, whether automatic request for vehicle pictures will be generated. |
| PremiumVariant() | |
| PremiumVariant.CoverTerritory::string | According to classificator 21101/CoverTerritory. |
| | Read only. |
| PremiumVariant. ExcessOtherStandardAmount::string | According to classificator 21101/ ExcessOtherStandardAmount for ProductLineVersionID >= 96. |

| | According to classificator 21101/ ExcessOtherStandardAmount[Currency] for ProductLineVersionID <= 95. |
|--|---|
| | Values may be either numbers or numbers with additional notes, e.g.,: |
| | • 0(140)* |
| | • 140 |
| | Read only. |
| PremiumVariant. ExcessOtherStandardPercentage::integer | According to classificator 21101/ExcessOtherStandardPercentage . Read only. |
| PremiumVariant.PaymentCount::integer | According to classificator PolicyPaymentCount. Read only. |
| PremiumVariant.Premium::decimal | Premium variant. Read only. |

The following product-specific system messages are generated at web service level. Additional system messages may be generated at business system level.

| Mess | Messages | | |
|------|----------------------|--|---|
| Туре | Code | Text | Condition |
| 4 | PolicyPremiumChanged | Polises prēmija ir mainījusies. | Policy premium in output data structure is different than policy premium in input data structure. |
| 1 | RequiredPolicyHolder | Lūdzu, norādiet apdrošinājuma ņēmēju! | Required parameters in PolicyHolder (Person) data structure are empty. |

4.2 Calculate

Operation is used to calculate policy premium.

| Parameters | |
|---|--|
| Policy::Policy05 | Policy data structure with input parameters. |
| POST /Veseris/Policy/05.asmx HTTP/1.1 Host: www.baltaonline.lv:8443 | |
| Content-Type: text/xml; charset=utf-8 Content-Length: length | |
| SOAPAction: "http://www.balta.lv/Calculate" | |
| POST | |
| /Veseris/Policy/05/Calculate.aspx | |

| Result | |
|------------|--|
| ::Policy05 | Policy data structure with operation result. |

4.3 CalculateVariant

Operation is used to calculate policy premium variants.

| Parameters | |
|---|--|
| Policy::Policy05 | Policy data structure with input parameters. |
| POST /Veseris/Policy/05.asmx HTTP/1.1 Host: www.baltaonline.lv:8443 Content-Type: text/xml; charset=utf-8 Content-Length: length SOAPAction: "http://www.balta.lv/CalculateVariant" | |
| POST /Veseris/Policy/05/CalculateVariant.aspx | |

| Result | |
|------------|--|
| ::Policy05 | Policy data structure with operation result. |
| | Policy05.PolicyLine21101.Object21101().PremiumVariant() is filled. |

4.4 Save

Operation is used to save quotation.

| Parameters | |
|---|--|
| Policy::Policy05 | Policy data structure with input parameters. |
| POST /Veseris/Policy/05.asmx HTTP/1.1 Host: www.baltaonline.lv:8443 Content-Type: text/xml; charset=utf-8 Content-Length: length SOAPAction: "http://www.balta.lv/Save" | |
| POST /Veseris/Policy/05/Save.aspx | |

| Result | |
|------------|---|
| ::Policy05 | Policy data structure with operation result |

4.5 Conclude

Operation is used to conclude policy.

| Parameters | | |
|---|--|--|
| Policy::Policy05 | Policy data structure with input parameters. | |
| POST /Veseris/Policy/05.asmx HTTP/1.1 Host: www.baltaonline.lv:8443 | | |
| Content-Type: text/xml; charset=utf-8 Content-Length: length | | |
| SOAPAction: "http://www.balta.lv/Conclude" | | |
| POST | | |
| /Veseris/Policy/05/Conclude.aspx | | |

| Result | |
|------------|---|
| ::Policy05 | Policy data structure with operation result |

4.6 Open

Operation is used to retrieve policy data.

| Parameters | | |
|---|----------------------------|--|
| PolicyID::integer | Policy (quotation) number. | |
| POST /Veseris/Policy/05.asmx HTTP/1.1 | | |
| Host: www.baltaonline.lv:8443 | | |
| Content-Type: text/xml; charset=utf-8 | | |
| Content-Length: length | | |
| SOAPAction: "http://www.balta.lv/Open" | | |
| xml version="1.0" encoding="utf-8"? | | |
| <soap:envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"></soap:envelope> | | |
| <soap:body></soap:body> | | |
| <open xmlns="http://www.balta.lv/"></open> | | |
| <policyid>int</policyid> | | |
| | | |
| | | |
| | | |
| GET / POST | | |
| /Veseris/Policy/05/Open.aspx | | |
| PolicyID=integer | | |

| Result | |
|------------|---|
| ::Policy05 | Policy data structure with operation result |

4.7 Printout

Operation is used to retrieve policy printout.

| Parametri | | |
|--------------------------------------|--|--|
| PolicyID::integer | Policy (quotation) number. | |
| DocumentType::string() | Array of document types to be included in operation result: | |
| | Insurance Product Information Document | |
| | Invoice | |
| | Object Policy | |
| | Object Quotation | |
| | • Policy | |
| | • Quotation | |
| | If parameter is empty, all document types available for particular policy are used. | |
| POST /Veseris/Policy/05.asmx HTTP/ | 1.1 | |
| Host: www.baltaonline.lv:8443 | | |

5 MTPL insurance

https://www.baltaonline.lv:8443/Veseris/Policy/18.asmx

https://www.baltaonline.lv:8443/Veseris/Policy/18.asmx

Motor Third Party Liability (MTPL, OCTA) Standard Contract.

5.1 Calculate

Operation is used to calculate policy premium.

Calculation variants for insurance period of 1, 3, 6, 9 and 12 months are included in operation result.

| Parameters | |
|--------------------------------|--|
| OwnerCode::string | Vehicle owner person code or registration number. Required if parameters VehicleRegCertNr and BillReferenceNr are empty. |
| VehicleRegNr::string | Vehicle registration number. Required. |
| VehicleRegCertNr::string | Vehicle registration certificate number. Required if parameters OwnerCode and BillReferenceNr are empty. |
| BillReferenceNr::string | Invoice number (rēķina-uzziņas numurs) of the sold vehicle. Required if parameters OwnerCode and VehicleRegCertNr are empty. Should be used for vehicles that are sold already, but not registered with new owner yet. |
| PolicyStartDate::dateTime | Cover start date. If parameter is empty, then first date when particular vehicle and particular owner is without insurance cover is used. If parameter is set then it shall satisfy constraint Today <= PolicyStartDate <= Today.AddDays(45) otherwise it will be ignored. |
| SalesUnitID::integer | Policy sales unit ID in BALTA systems. If parameter is empty, organizational unit ID of application user is used. |
| SalesPersonID::integer | Policy sales person ID in BALTA systems. If parameter is empty, person ID of application user is used. |
| PersonalAccident::string | Preferred personal accident cover level STD – standard PLUS – extended Optional. |
| DirectClaimSettlement::boolean | Indicator, whether direct claim settlement should be included in policy coverage. Optional. |

&SalesUnitID=int

| RoadAssistance::string | Preferred road assistance cover level | |
|---|---|--|
| | TRP1 – towing service only | |
| | | |
| | TRP2 – basic road assistance | |
| | TRP3 – full road assistance | |
| | Optional. | |
| Theft::boolean | Indicator, whether theft should be included in | |
| | policy coverage. | |
| | Optional. | |
| | 1 | |
| ClientlPAddress::string | IP address of client that initiated particular | |
| | request. | |
| | Shall be set if request is initiated from Internet. | |
| | Shall be empty if request is initiated from internal | |
| | system. | |

| Result | |
|--|---|
| PolicyStartDate::dateTime | Cover start date that was used for calculation. |
| BonusMalusClass::integer | Bonus-Malus class. |
| PersonalAccident::string | Actual personal accident cover level that was used for calculation. Left empty if this additional cover is not available for the particular vehicle. |
| DirectClaimSettlement::boolean | Actual direct claim settlement value that was used for calculation. Value is false if this additional cover is not available for the particular vehicle. |
| RoadAssistance::string | Actual road assistance cover level that was used for calculation. Left empty if this additional cover is not available for the particular vehicle. |
| Theft::boolean | Actual theft value that was used for calculation. Value is false if this additional cover is not available for the particular vehicle. |
| CalculationVariants | Array with calculation variants. |
| CalculationVariant.PolicyPeriod ::integer | Insurance period. |
| CalculationVariant.PolicyPremium ::decimal | Premium. |

| CalculationVariant.PolicyPremiumWithAdditionalCover ::decimal | Premium with the actual additional cover values as indicated in the calculation result. |
|---|--|
| CalculationVariant.PersonalAccidentPremium ::decimal | Premium for personal accident cover. |
| CalculationVariant.DirectClaimSettlementPremium ::decimal | Premium for direct claim settlement cover. |
| CalculationVariant.RoadAssistancePremium::decimal | Premium for road assistance cover. |
| CalculationVariant.TheftPremium::decimal | Premium for theft cover. |
| OwnerContacts::boolean | Indicator, whether vehicle owner contacts should be provided at policy conclusion. |
| HolderContacts::boolean | Indicator, whether vehicle holder contacts should be provided at policy conclusion. |
| PolicyBuyerContacts::boolean | Indicator, whether policy buyer contacts should be provided at policy conclusion. |

7 Policy

https://www.baltaonline.lv:8443/Veseris/Policy.asmx

https://www.baltaonline.lv:8443/Veseris/Policy

This web service provides generic policy related operations intended for data replication.

7.1 PolicyData Data Structure

The following complex data structure **PolicyData** is used to represent policy data in operation result in context of Policy web service.

| PolicyData | |
|--|--|
| ProductID::string | According to classificator Product. |
| PolicyID::integer | Policy number. |
| LTABPolicyID::string | LTAB policy number. |
| | Available in context in MTPL policies only. |
| Status::string | According to classificator PolicyStatus. |
| StartDate::dateTime | Policy version cover start date (and time if available for particular insurance type). |
| | Depending on policy status and last operation it may be: |
| | policy cover start date, |
| | mid-term adjustment cover start date, |
| | policy cancellation date. |
| EndDate::dateTime | Policy version cover end date. |
| ConcludeDate::dateTime | Policy conclude date (and time if available for particular insurance type). |
| Currency::string | According to classificator Currency. |
| Premium::decimal | Policy premium. |
| PaymentCount::integer | According to classificator PolicyPaymentCount. |
| SalesUnitID::integer | Policy sales unit ID in BALTA systems. |
| SalesPersonID::integer | Policy sales person ID in BALTA systems. |
| InsuranceType::string | Insurance product subtype. |
| VersionID::string | Unique policy version ID. |
| _ | D.11. 1.1. |
| VersionDate::dateTime | Policy version date. |
| VersionDate::dateTime PolicyHolder::Person | Policy version date. Policy holder. |

| | T |
|--|--|
| PolicyLineData.ProductLineID::string | According to classificator ProductLine. |
| PolicyLineData.PolicyLineID::integer | Policy line ID in BALTA systems. |
| PolicyLineData.ProductLineVersionID::integer | Product line version ID. |
| | Shall be used to retrieve correct version of product specific classificators. |
| PolicyLineData.Premium::decimal | Policy line premium. |
| PolicyLineData.CommissionPercentage::integer | Policy line commission percentage. |
| PolicyLineData.ObjectData() | List of policy line insured objects. |
| ObjectData.ObjectID::integer | Object ID in BALTA systems. |
| ObjectData.Description::string | Object description. |
| ObjectData.InsuredProperty::Address | Insured property (optional). |
| ObjectData.InsuredPerson::Person | Insured person (optional). |
| ObjectData.InsuredVehicle::Vehicle | Insured vehicle (optional). |
| ObjectData.SumInsured::decimal | Sum insured. |
| Payment() | Payment schedule. |
| Payment.PaymentNo::integer | Payment number. |
| Payment.DueDate::dateTime | Payment due date. |
| Payment.Amount::decimal | Payment amount. |
| Payment.ReceivedDate::dateTime | Payment received date. |
| Payment.RemainingAmount::decimal | Payment amount not received yet. |
| Payment.DebtTransfer::boolean | Debt for particular payment has been transferred from PolicyHolder to SalesUnitID. |
| Payment.DebtTransferAmount::decimal | Debt amount that has been transferred for particular payment. |

7.2 *Open*

Operation is used to retrieve data of last policy transaction (current version).

| Parameters | | |
|--|----------------|--|
| PolicyID::integer | Policy number. | |
| POST /Veseris/Policy.asmx HTTP/1.1 | | |
| Host: www.baltaonline.lv:8443 | | |
| Content-Type: text/xml; charset=utf-8 | | |
| Content-Length: length | | |
| SOAPAction: "http://www.balta.lv/Open" | | |
| xml version="1.0" encoding="utf-8"? | | |
| <pre><soap:envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"></soap:envelope></pre> | | |
| <soap:body></soap:body> | | |
| <open xmlns="http://www.balta.lv/"></open> | | |
| <policyid>int</policyid> | | |
| | | |
| | | |
| | | |
| GET / POST | | |
| /Veseris/Policy/Open.aspx | | |
| PolicyID=integer | | |

| Result | |
|--------------|--|
| ::PolicyData | Policy data structure with operation result. |

7.3 ListTransaction

Operation is used to retrieve all policy transactions performed on particular date.

Data is available in real time. However it should noted that because of long running database transactions it is possible that new transactions are registered in the past compared to moment of operation execution. Thus if operation is called for actual date (Today), then result should be interpreted as replacing data change, not incremental data change. If operation is called for date in past, then there should be no issues.

If multiple transactions were performed with particular policy during particular date, then result will contain one record for each of them in execution order.

| Parameters | |
|---|-------------------|
| TransactionDate::dateTime | Transaction date. |
| POST /Veseris/Policy.asmx HTTP/1.1 Host: www.baltaonline.lv:8443 Content-Type: text/xml; charset=utf-8 Content-Length: length SOAPAction: "http://www.balta.lv/ListTransaction" | |

| GET / POST | |
| /Veseris/Policy/ListTransaction.aspx | |
| TransactionDate=dateTime | |

| Result | |
|----------------|--|
| ::PolicyData() | The array containing policy data structures with operation result. |

7.4 Printout

Operation is used to retrieve policy document printouts.

Data is available in real time.

Result contains documents of all versions of particular policy stored in BALTA document archive ordered by creation date. No document generation is performed.

Thus if there was mid-term adjustment, then both original policy printout and addendum for changes printout will be included in result if they are available.

| Parameters | |
|---|----------------|
| PolicyID::integer | Policy number. |
| POST /Veseris/Policy.asmx HTTP/1.1 Host: www.baltaonline.lv:8443 Content-Type: text/xml; charset=utf-8 Content-Length: length SOAPAction: "http://www.balta.lv/Printout" | |

| GET / POST | |
| /Veseris/Policy/Printout.aspx | |
| PolicyID=integer | |

| Result | |
|--------------------------------------|----------------------------------|
| DocumentData() | |
| DocumentData.DocumentID::integer | Document ID in BALTA systems. |
| DocumentData.DocumentDate::dateTime | Document creation date. |
| DocumentData.DocumentType::string | Document type. |
| DocumentData.PolicyVersionID::string | Unique policy version ID. |
| DocumentData.Content::base64Binary | Document printout in PDF format. |

8 Payment

https://www.baltaonline.lv:8443/Veseris/Payment.asmx https://www.baltaonline.lv:8443/Veseris/Payment

This web service provides payment related operations.

8.1 ListBrokerInvoiceDetails

Operation is used to retrieve broker invoice details that describe mutual payments between policy holder, broker and insurer for particular period.

Data source is updated daily.

| Parameters | |
|--|------------------------|
| InvoiceID::integer | Broker invoice number. |
| POST /Veseris/Payment.asmx HTTP/1.1 Host: www.baltaonline.lv:8443 Content-Type: text/xml; charset=utf-8 Content-Length: length SOAPAction: "http://www.balta.lv/ListBrokerInvoiceDetails" | |
| <pre><?xml version="1.0" encoding="utf-8"?> <soap:envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"> <soap:body> <listbrokerinvoicedetails xmlns="http://www.balta.lv/"> <invoiceid>int</invoiceid> </listbrokerinvoicedetails> </soap:body> </soap:envelope></pre> | |
| GET / POST | |
| /Veseris/Payment/ListBrokerInvoiceDetails. | aspx |
| InvoiceID=integer | |

| Result | |
|---|--|
| BrokerInvoiceData() | |
| BrokerInvoiceData.SalesUnitName::string | Policy sales unit name. |
| BrokerInvoiceData.SalesPersonName::string | Policy sales person full name. |
| BrokerInvoiceData.PolicyHolderName::string | Policy holder full name. |
| BrokerInvoiceData.PolicyID::string | Policy number. |
| BrokerInvoiceData.LTABPolicyID::string | LTAB policy number. Available in context in MTPL policies only. |
| BrokerInvoiceData.PolicyStartDate::dateTime | Policy line cover start date. |
| BrokerInvoiceData.PolicyEndDate::dateTime | Policy line cover end date. |
| BrokerInvoiceData.Currency::string | According to classificator Currency. |
| BrokerInvoiceData.ProductLineID::string | According to classificator ProductLine. |
| BrokerInvoiceData.WrittenPremium::decimal | Policy line written premium. |
| BrokerInvoiceData.CancelledPremium:: | Policy line cancelled premium. |
| decimal | |
| BrokerInvoiceData.PaymentCount::integer | According to classificator PolicyPaymentCount. |

| BrokerInvoiceData.PaymentNo::integer | Payment number. |
|---|---|
| BrokerInvoiceData.InstallmentAmount:: decimal | Installment amount. |
| BrokerInvoiceData.ReceivedAmountByBroker ::decimal | Payment amount received by broker. |
| BrokerInvoiceData.ReceivedDateByBroker:: dateTime | Payment received date by broker. |
| BrokerInvoiceData.ReceivedAmountByInsure r::decimal | Payment amount received by insurer. |
| BrokerInvoiceData.ReceivedDateByInsurer:: dateTime | Payment received date by insurer. |
| BrokerInvoiceData.CommissionPercentage:: integer | Policy line commission percentage. |
| BrokerInvoiceData.CommissionAmount:: decimal | Payment commission amount. |
| BrokerInvoiceData.BrokerDebtAmount:: decimal | Amount to be paid by broker to insurer. |
| BrokerInvoiceData.InsurerDebtAmount:: decimal | Amount to be paid by insurer to broker. |
| LastUpdate::dateTime | Time of last update of data source. |

8.2 ListDebtor

Operation is used to retrieve unsettled payments until particular date.

Data source is updated daily.

Result describes situation at the moment of operation execution. Historical data is not available.

If **DateTo** is set to past e.g. Today.AddDays(-1) then result contains payments with missed due date only.

If **DateTo** is set to future e.g. Today.AddDays(14) then result additionally contains next installments in particular period. Note - next installments are generated 15 days before due date.

| Parameters | |
|--|-------------------|
| DateTo::dateTime | Maximum due date. |
| POST /Veseris/Payment.asmx HTTP/1.1 Host: www.baltaonline.lv:8443 Content-Type: text/xml; charset=utf-8 Content-Length: length SOAPAction: "http://www.balta.lv/ListDebtor" xml version="1.0" encoding="utf-8"? <soap:envelope <="" td="" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"></soap:envelope> | |
| xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"> | |
| GET / POST | |
| /Veseris/Payment/ListDebtor.aspx | |
| DateTo=dateTime | |

| Result | |
|----------------------------------|--|
| DebtorData() | |
| DebtorData.PolicyID::integer | Policy number. |
| DebtorData.Amount::decimal | Debt amount. |
| DebtorData.Currency::string | Installment currency. |
| DebtorData.DueDate::dateTime | Installment due date. |
| DebtorData.ReminderSent::boolean | Indicator, whether reminder has been sent. |
| LastUpdate::dateTime | Time of last update of data source. |

8.3 ListReceived

Operation is used to retrieve payments that have been received on particular date.

Data source is updated daily.

Data is available on next business day after payment has been received.

| Parameters | |
|--|------------------------|
| ReceivedDate::dateTime | Payment received date. |
| <soap:body> <listreceived <br="" xmlns="http://www.balta <ReceivedDate>dateTime</ReceivedD </ListReceived> </soap:Body> </soap:Envelope></td><td>3.org/2001/XMLSchema-instance">Schema" xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"> .lv/"></listreceived></soap:body> | |
| GET / POST /Veseris/Payment/ListReceived.aspx | |
| ReceivedDate=dateTime | |

| Result | |
|--|-------------------------------------|
| ReceivedData() | |
| ReceivedData.PolicyID::integer | Policy number. |
| ReceivedData.InstallmentAmount::decimal | Installment amount. |
| ReceivedData.InstallmentCurrency::string | Installment currency |
| ReceivedData.InstallmentDueDate::dateTime | Installment due date. |
| ReceivedData.PaymentAmount::decimal | Payment amount. |
| ReceivedData.PaymentCurrency::string | Payment currency. |
| ReceivedData.PaymentReceivedDate::dateTime | Payment received date. |
| ReceivedData.BalanceAmount::decimal | Balance amount. |
| ReceivedData.BalanceCurrency::string | Balance currency. |
| LastUpdate::dateTime | Time of last update of data source. |

9 Road assistance service

https://www.baltaonline.lv:8443/Veseris/Policy/35.asmx https://www.baltaonline.lv:8443/Veseris/Policy/35.asmx

Road assistance service as standalone insurance.

9.1 Calculate

Operation is used to calculate policy premium.

Calculation variants for insurance period of 1, 3, 6, 9 and 12 months are included in operation result.

10.3Save

Operation is used to save quotation. If the data of policy holder are not provided the policy holder will be the holder of particular vehicle.

| Parameters | |
|------------------------------------|--|
| OwnerCode::string | Vehicle owner person code or registration number. |
| | Required if parameter VehicleRegCertNr is empty. |
| VehicleRegNr::string | Vehicle registration number. |
| | Required. |
| VehicleRegCertNr::string | Vehicle registration certificate number. |
| | Required if parameter OwnerCode is empty. |
| PolicyStartDate::dateTime | Cover start date. |
| | Required. |
| PolicyEndDate::dateTime | Cover end date. |
| | Required. |
| PolicyHolder.Type::integer | According to classificator PersonType |
| | 1 – Natural person |
| | 2 – Legal person |
| PolicyHolder.Resident::boolean | Indicator, whether person is resident. |
| PolicyHolder.IdentityNo::string | Personal identity No. for natural persons. |
| | Organization registration No. for legal persons. |
| PolicyHolder.Name::string | Name for natural persons. |
| | Shall not be set for legal persons. |
| PolicyHolder.Surname::string | Surname for natural persons. |
| | Full name for legal persons. |
| PolicyHolder.DateOfBirth::dateTime | Date of birth for natural persons. |
| , | Registration date for legal persons. |
| SalesUnitID::integer | Policy sales unit ID in BALTA systems. |
| · | If parameter is empty, organizational unit ID of application user is used. |
| SalesPersonID::integer | Policy sales person ID in BALTA systems. |
| | If parameter is empty, person ID of application user is used. |
| ClientlPAddress::string | IP address of client that initiated particular request. |
| | Shall be set if request is initiated from Internet. |

```
Shall be empty if request is initiated from
                                             internal system.
